2021 Annual Drinking Water Quality Report

SONTAG WANILLA WATER ASSOCIATION PWS ID #390006 IUNE 10, 2022

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from three wells drawing water from the Catahoula Formation and Miocene Series Aquifer.

Our source water assessment has been completed for our wells and it show our wells have a lower susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Alvin Ashley at 601-587-0820. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the last Thursday of each month at 6:00PM at the Sontag Community Center located at 979 Sontag Nola Road.

Sontag Wanilla Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1" to December 31", 2021. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Non-Detects (ND) - laboratory analysis indicates that the constituent is not present.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level - The AMaximum Allowed≅ (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - The AGoal≅(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

TEST RESULTS

Contaminant	Violati on Y/N	Date Collected	Detecte d level	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurem ent	MCL G	MCL	Likely Source of Contamination
Disinfectants & Dis (There is convincin	infection I	By-Products that addition	of a disinfe	ectant is necess	ary for contro	l of microbi	al contaminants.)

* MOST RECENT SAMPLE

Radioactive Contaminants:

(5) Alpha emitters. Certain minerals are radioactive and may emit a form of radiation known as alpha radiation. Some people who drink water containing alpha emitters in excess of the MCL over many years may have an increased risk of getting cancer.

Inorganic Contaminants:

- (9) Sodium. Likely Source of Contamination-Road Salt, Water Treatment Chemicals, Water Softeners, and Sewage Effluents,
- (10) Barium. Some people who drink water containing barium in excess of the MCL over many years could experience an increase in their blood pressure
- (14) Copper. Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time could experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor.
- (16) Fluoride. Some people who drink water containing fluoride in excess of the MCL over many years could get bone disease, including pain and tenderness of the bones. Children may get mottled teeth.
- (17) Lead. Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure.

Volatile Organic Contaminants:

(73) TTHMs [Total Trihalomethanes]

HAA5

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

Sontag Wanilla Water Association sampled for asbestos in our water in 2019 and the results for asbestos were None Detected for a concentration of <0.17MFL.

******* Additional Information for Lead********

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Sontag-Wanilla Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.cpa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agencys Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers.

This CCR Report will not be delivered by mail but you may obtain a copy at our office.

PROOF OF PUBLICATION

2021 Annual Drinking Water Quality Report SONTAG WANILLA WATER ASSOCIATION PWS ID #390006 JUNE 10, 2022

We're pleased to present to you every day. Our constant goal is to provide you with a safe and dependable supply of druking water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of druking water. We want you counterstand the efforts we make to commanly improve the water treatment process and protect our water recourses. We are committed to ensuring the quality of your vater. Our water source is from three wells drawing water from the Catationia Formation and Miscenie Series Aqualer.

Our source water assessment has been completed for our wells and it show our wells have a lower susceptibility to

If you have any questions about this report or concerning your water utility, please contact Alvin Ashley at 601-587-0820. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled receiving. They are held on the last Thursday of each month at 6:00PM at the Sourag Community Content located at 979 Smiling Nota Road.

houseg Wanilla Water Association routinely monitors for constituents in your drinking water according to Federal and Matellaws. Fine table shows the results of our monitoring for the period of January 1° to Docember 31°, 2021. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, morganic and organic chemicals, and radioactive substances. All dranking water, including builted drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's imponium to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Non-Detects (NII) - laboratory analysis indicates that the constituent is not present.

Parts per unificon (ppurd or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (pph) or Micrograms per liter - one part per billion corresponds to one minute in 2,900 years, or a single penny in \$10,000,000.

Paracines per liter (pCo/D) - picocuries per liter is a measure of the radioactivity in water.

Action Level - the concentration of a contaminant which, if exceeded, friggers treatment or other requirements which a water system may a follow.

Treatment Perlanque (ITD) - A treatment/terlinque is a required process intended to reduce the level of a contaminant in distance water.

Maximum Contaminant Level - The AMaximum Allowed (MCL) is the highest level of a contaminant that is allowed in dimking water. MCL sace set as close to the MCL is as feasible using the best available treatment technology.

Maximum Contaminant Level Goal. The AGoal=(MCLG) is the level of a contaminant in drinking water below which there is no known of expected risk in health. MCLGs allow for a margin of safety.
